

## HATLAPA now caters for your filtration needs.

We offer a range of filter elements which meets the whole spectrum of your vessel's requirements.

- **Quality driven by experience.**

All products adhere to HATLAPA's stringent quality requirements - with over 90 years of experience in marine fabrication, the quality of our products is certified and guaranteed.

- **Close to wherever you are.**

Two filter-dedicated warehouses at Rotterdam and Singapore ensure orders are delivered at minimum transit times.

- **Available on request.**

Our filter elements are always ex-stock. To put it simply: lead time = 0

## Still not convinced?

At **HATLAPA**, we believe that our customers are like us: perfectionist!

It can only be expected that a set of nicely folded punch lines is not enough to satisfy all your questions.

## IN NEED OF FILTRATION SPARES? THERE'S SOMEONE YOU ALREADY TRUST.

# Oily Water Separator

15ppm

IMO Legislation specifies a maximum of 15ppm oil content in overboard bilge water.

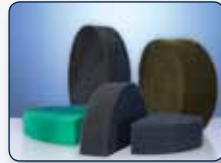

Around the world's most busy ports, this figure is diminished to barely 5ppm.

No wonder bilge water separation is considered one of the most crucial operations on board. indicatively, oily water separators (ows) are operated only during the daytime, under the chief engineer's supervision.

So, when it comes to the maintenance of your OWS, who are you going to trust?

- You will trust a supplier who has established a name associated with quality.
- You will trust a supplier who offers a well known world wide service.
- You will trust a supplier who has accumulated an unmatched variety of branded spares.

For the maintenance of your OWS, you will only trust the best.

Coalescers - just a glimpse of our dazzling array

All needs covered

Driven by quality

As recommended by makers

# Lube Oil Filtration

Engine health, low-maintenance

Engines need clean, long-lasting lube oils.

Your engine's health is threatened by contaminants collected by the lube oil as it passes through the crank case. These contaminants are detrimental to the lube oil's quality, decreasing the engine's service intervals and increasing the potential need for a costly engine overhaul.

HFT's lube oil filtration solutions have the capacity to expel these contaminants to sub-micron level. As lube oil is kept cleaner, your engine will run more smoothly, and service intervals will be further apart.

By providing a variety of sizes and strands, permanently stocked in our Rotterdam and Singapore warehouses, any brand compatibility concern is abolished.

The result: minimised maintenance costs and virtually zero engine failures.

Striking variety...

... of sizes and moulds

Astonishing results down to sub-micron size

Masterfully built

# Fuel Filtration

MFO, MDO, IFO, HFO, LS, MGO

Six kinds of different fuels, all fed to your engine.

These have unique viscosities, making the engine more susceptible to clogging. Fuel oil filtration thus becomes imperative.

Having in mind that the reliability of your engines depends on the filter's performance, HFT joined forces with renowned makers to ensure its fuel oil filters adhere to the highest standards.

The outcome is a range of compact, long-life filter elements ready to meet the most demanding requirements.

One-stop solution for your engine's filters

A filter for every fuel

Low and high pressure applications

Joint forces with the world's leading company
